

ADHI COLLEGE OF ENGINEERING AND TECHNOLOGY

AN AUTONOMOUS INSTITUTION | ACCREDITED BY NAAC | APPROVED BY AICTE

CEBROID — CTF — OFFICIAL RULES

The organizers, faculty members, and coordinators of Adhi College of Engineering and Technology warmly welcome you to Cebroid CTF. Thank you for showing interest in the Cebroid CTF event.

Please read all the rules carefully before participating in the CTF. By joining this event, you agree to follow all the guidelines listed below.

Scope

- Do not attack the CTF platform infrastructure. The CTF platform, scoreboard, hosting servers, and event website are strictly out of scope.
- All attacks must be limited to the URLs, files, IPs, and information provided in the challenge description.
- If a vulnerability is found in the CTF platform itself, report it immediately to the organizers/admins.

Anti-Cheating Policy

- **No flag sharing** – sharing flags, hints, or solutions with participants outside your team is strictly prohibited.
- **Team collaboration only** – collaboration is permitted only within the same registered team.
- **Team size** – since this CTF is declared a secondary (non-competitive) event, each team must not exceed 2 members.
- **One account per participant** – only one account per participant is allowed. Creating multiple accounts to bypass restrictions or manipulate the scoreboard will result in immediate disqualification.

Requirements

Participants are requested to bring their own laptop.

Participants are required to have access to systems running:

- Windows
- Linux

Some challenges may require tools or environments available only on these operating systems.

Flag Format

Unless specified otherwise in the challenge description, all flags will follow this specific format:

`Cebroid{example_flag_here}`

Submit the entire flag, including the prefix and brackets.

Code of Conduct

- Do not intentionally disrupt the network or challenge environment in a way that disrupts or prevents access for other teams.
- Respect all participants and organizers.
- Harassment, toxicity, abusive behaviour, and teasing/provoking will not be tolerated and may result in disqualification.

AI Assistance Policy

- The use of AI tools (any form of AI or automated assistant) to directly solve challenges or generate solutions is strictly Not Allowed.
- Investigative challenges must be carried out using non-AI-integrated browsers/search engines (such as DuckDuckGo, or similar).
- Participants are required to rely on their own skills, research, and team collaboration.
- Use of articles is permitted to a certain extent (e.g. using online investigative tools and decoders).
- Violation of these rules may result in immediate disqualification.

Internet Access & Online Tool Boundary

- **General research** – general web search, official documentation, and vendor/tool manuals are allowed for learning concepts. Do not search for the challenge name, hash, or file content directly, and do not look up ready-made write-ups or solutions for the challenges provided in this event.
- **Allowed tools** – browser-based decoders, encoders, hash calculators, and OSINT lookup tools (e.g. CyberChef, ExifTool viewers, WHOIS/DNS lookups) are permitted, as long as you are interpreting the output yourself rather than having the tool solve the challenge for you.
- **Not allowed** – any AI chatbot or assistant (ChatGPT, Claude, Gemini, Copilot, and similar), AI browser extensions, and AI-powered search summaries or auto-solvers are not allowed at any stage of solving a challenge, including for hints or explanations.
- **Articles vs. solutions** – reading an article or tutorial to understand a technique or concept is permitted; copying a ready-made exploit, script, or solution written for this exact challenge from a write-up or forum post is not.
- **When in doubt** – if you are unsure whether a tool, site, or resource is allowed, ask the organizers before using it. Using it first and asking afterward will be treated as a violation.

Organizers' Authority

The Cebroid organizers reserve the right to:

- Modify the rules if necessary.
- Adjust challenge points.
- Remove or disqualify teams engaged in cheating or malicious activity.

All organizers' decisions are final.

**“Question the code. Challenge the limits.
Exploit the weakness, respect the boundaries.
Break the systems, not the rules.”**
